MTD / QTD / YTD and growth percentages

10 VISUALS

Page 1 Insights: Executive Overview

KPI CARD INSIGHTS

- **Total Customers:** 60K customers, ~1.6 accounts each: cross-sell headroom
- **Total Accounts:** 95K accounts, but 15% already dormant or closed
- **Total Transaction Amount:** ₹1.42bn (~₹118M a month): stable, not scaling
- **Total Loan Amount:** ₹9.21bn, ~2x account balances: check funding
- **Transaction Amount YTD:** Equals the full-year total; base for the 2025 target
- **Transaction Amount YoY %:** 0.28%: effectively flat

CHART INSIGHTS

- **Transaction Amount - Current vs Previous Year:** Both years overlap in a ₹113-123M band; mild seasonality
- **Loan Portfolio by Loan Type:** Even 16-17% each: diversified, no product focus
- **Transaction Amount by Channel:** Within 2%; Branch still matches UPI (cost to serve)
- **Top 5 States by Customer Base:** Top 5 states = 54% of customers; Maharashtra 20%

PAGE INSIGHTS

Stable, diversified and flat. The challenge on this page is growth and the shift to digital channels, not stability.

TOP 3 ACTIONS

1. **Set growth targets per channel and region**
2. **Migrate branch/ATM volume to UPI and mobile**
3. **Expand in under-penetrated states (e.g. Uttar Pradesh)**

Page 2 Insights: Customer & Account

KPI CARD INSIGHTS

- **Total Account Balance:** ₹4.35bn balance; 74% sits in CASA accounts
- **Average Account Balance:** ₹45.8K average = ~2.5% of income: thin wallet share
- **No. of Active Cards:** ~0.95 card per customer: card headroom
- **Average Customer Income:** ₹1.82M income: affluent base for wealth products
- **Average Credit Score:** ~600 score is weak; links to late payments
- **No. of Closed Accounts:** 4,767 closed = 5% of accounts

CHART INSIGHTS

- **New Customers by Year:** Flat at ~2.8-3.0K a year for 20 years; verify 2025
- **Account Status Distribution:** 85% active, 10% dormant, 5% closed
- **Customer Base by Occupation:** Even spread; self-employed types = 43% of base
- **Account Balance by Account Type:** Savings 44%; FD only 9%, NRI 4%

PAGE INSIGHTS

Cheap funding and affluent customers, but shallow engagement and an acquisition engine that has not grown in two decades.

TOP 3 ACTIONS

1. **Launch salary-sweep, FD and NRI products**
2. **Reactivate dormant accounts after 60-90 idle days**
3. **Build a business-banking offer for the 43% self-employed**

Page 3 Insights: Transactions & Fraud

KPI CARD INSIGHTS

- **Average Transaction Value:** ₹6.04K average: baseline for anomaly rules
- **Maximum Transaction Value:** ₹75.6K max = 12.5x average: extra checks
- **Total Fraudulent Amount:** ₹3.18M = ~0.5% of card spend, ~1,700 cases
- **No. of Card Transactions:** 353.8K card transactions (~29.5K a month)
- **Fraud Rate:** 0.49% = 1 in 200 transactions
- **Average Fraudulent Transaction Amount:** ₹1.85K looks like a normal purchase

CHART INSIGHTS

- **Transaction Volume Trend:** 18.7K-21K a month; February is the low
- **Fraudulent Transactions by Merchant Category:** No hotspot (107-140 cases); Healthcare tops
- **Card Transaction Amount by Merchant Category:** Near-identical spend by category; validate data
- **Fraudulent Transactions Trend:** March spike; December is the year's high

PAGE INSIGHTS

Fraud is small in value but frequent, spread across every category and disguised as normal spending.

TOP 3 ACTIONS

1. **Add behavioural and velocity fraud models**
2. **Category rules for Healthcare, Rent, Utilities**
3. **Tighten controls before year-end spending**

Page 4 Insights: Loans & Customer Service

KPI CARD INSIGHTS

- **No. of Loans:** 22K loans, ~₹419K each; 65% active
- **No. of Active Loans:** 14.3K active; 25% closed = repeat-borrower pool
- **Ticket Resolution Rate:** 79.7%: about 1 in 5 tickets stays open
- **Total Loan Amount:** ₹9.21bn book with 10% bad loans
- **No. of Defaulted Loans:** 1,594 defaults = 7.2% (10% with write-offs)
- **Late Payment Rate:** 12.2% = 1 in 8 payments late

CHART INSIGHTS

- **Loan Portfolio by Loan Type:** Even spread; defaults by type matter more
- **Late Payment Trend:** 340-410 a month; peaks in Mar, Jul, Sep
- **No. of Loans by Status:** 65 / 25 / 7 / 3%: defaults are the weak spot
- **Support Tickets by Issue Type:** Fraud Report (369) and KYC (353) lead

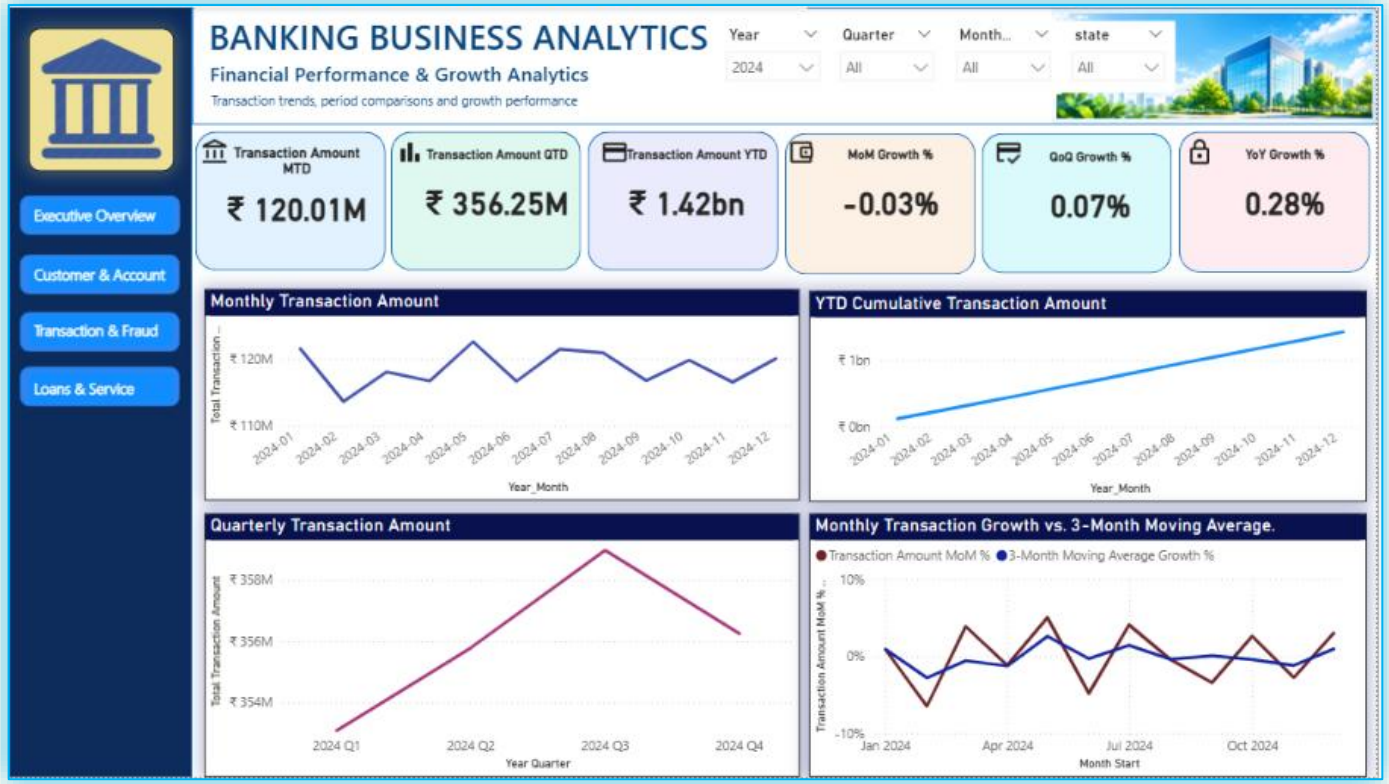

PAGE INSIGHTS

A large, evenly spread loan book with a credit-quality problem, plus service gaps on fraud and KYC queries.

TOP 3 ACTIONS

1. **Early-warning triggers and a recovery team**
2. **Pre-due reminders and auto-debit before peak months**
3. **Fast-track fraud desk and KYC self-service**

Page 5 Insights: Financial Performance & Growth

KPI CARD INSIGHTS

- **Transaction Amount MTD:** ₹120.0M, just above the ~₹118M monthly average
- **Transaction Amount QTD:** ₹356.3M; Q4 is below Q3
- **Transaction Amount YTD:** ₹1.42bn; flat on last year
- **MoM Growth %:** -0.03% conflicts with chart (+3% in Dec): validate
- **QoQ Growth %:** +0.07% conflicts with chart (Q4 < Q3): validate
- **YoY Growth %:** 0.28%: flat

CHART INSIGHTS

- **Monthly Transaction Amount:** ₹113.5M (Feb) to ₹122.5M (May), no upward drift
- **Cumulative Transaction Amount:** Near-straight climb: steady, no acceleration
- **Quarterly Transaction Amount:** Under 2% spread; Q3 peak, Q4 slips
- **Monthly Growth (%):** -6.5% to +5%, nets to roughly zero: noise

PAGE INSIGHTS

Stable but stagnant: +/-5% monthly swings hide a flat annual trend, and two growth KPIs need validating before presenting.

TOP 3 ACTIONS

1. **Fix MoM and QoQ DAX date logic**
2. **Plan stronger Q4 festive campaigns**
3. **Set an explicit growth target with owners**

01

Executive Overview

A consolidated view of banking performance

10 VISUALS

In this section

1. Total Customers
2. Total Accounts
3. Total Transaction Amount
4. Total Loan Amount
5. Transaction Amount YTD
6. Transaction Amount YoY %
7. Transaction Amount - Current vs Prev...
8. Loan Portfolio by Loan Type
9. Transaction Amount by Channel
10. Top 5 States by Customer Base

Total Customers

QUESTION

How many unique customers does the bank have?

FORMULA / DAX MEASURE

```
1 Total Customers =
2     COUNTROWS(Customers)
3
```

RESULTANT VISUAL

ANALYST INSIGHT

60K customers hold 95K accounts, about 1.6 accounts each. The base is only moderately cross-sold, so existing customers are the cheapest growth lever.

RECOMMENDED ACTION

Run a second-product campaign (FD, Card, Loan) for single-account customers.

Total Accounts

1

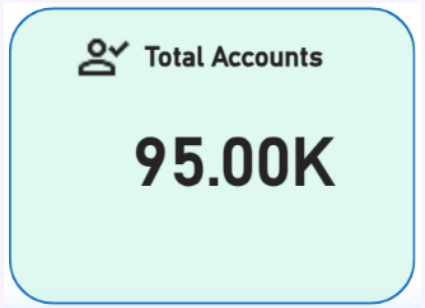

QUESTION

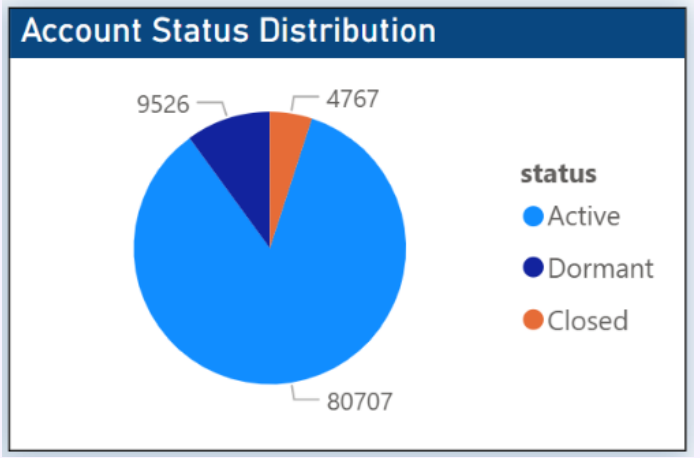

Q How many bank accounts are held across all customers?

FORMULA / DAX MEASURE

```
1 Total Accounts =
2     COUNTROWS(Accounts)
3
```

RESULTANT VISUAL

ANALYST INSIGHT

15% of the **95K accounts** are already **Dormant** or **Closed** (about **14.3K**). The gross account count overstates the truly engaged base.

RECOMMENDED ACTION

Report 'Active accounts' as the headline KPI and launch reactivation.

Total Transaction Amount

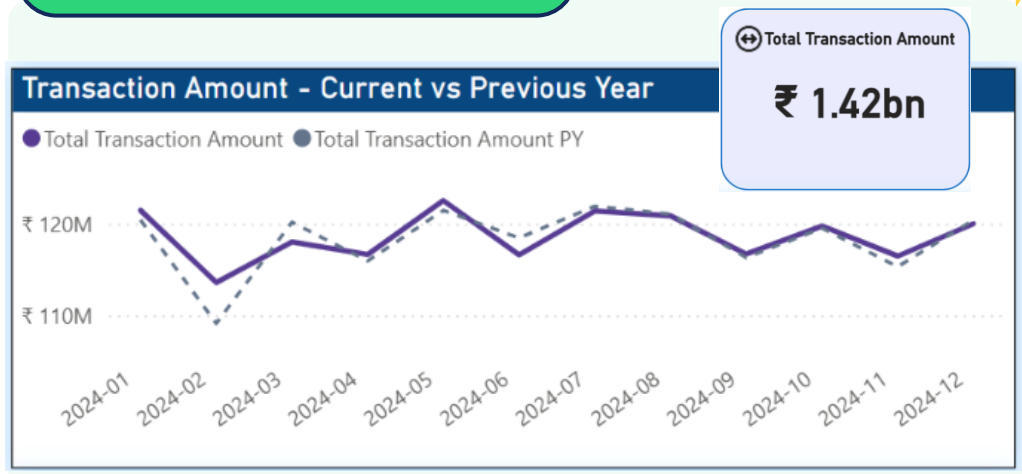

QUESTION

What is the Total value of all transactions in the selected period (2024) and insights?

FORMULA / DAX MEASURE

```
1 Total Transaction Amount =
2     SUM(Transactions[amount])
3
```

RESULTANT VISUAL

ANALYST INSIGHT

₹1.42Bn moved in 2024: about ₹118M a month and roughly ₹24K per customer a year. Monthly values stay within ₹113-123M, so the business is stable but not scaling.

RECOMMENDED ACTION

Set a per-customer transaction target and reward higher usage (cashback, bundles).

Total Loan Amount

QUESTION

Q What is the Total amount of loans issued by the bank and how it is related to amount held in account balances?

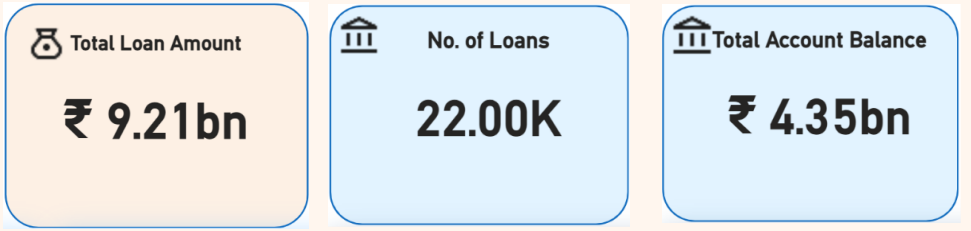

FORMULA / DAX MEASURE

```
Total Account Balance =
    SUM(Accounts[balance])
```

```
No.of Loans =
    COUNTROWS(Loans)
```

```
Total Loan Amount =
    SUM(Loans[loan_amount])
```

RESULTANT VISUAL

ANALYST INSIGHT

₹9.21bn lent across **22K loans** (about ₹419K each), roughly **2x** the **₹4.35bn** held in account balances. Lending may lean on Non-Deposit Funding (Check: Loan amount = sanctioned or outstanding?).

RECOMMENDED ACTION

Review loan-to-deposit position with Treasury; confirm the measure definition.

Transaction Amount YoY %

QUESTION

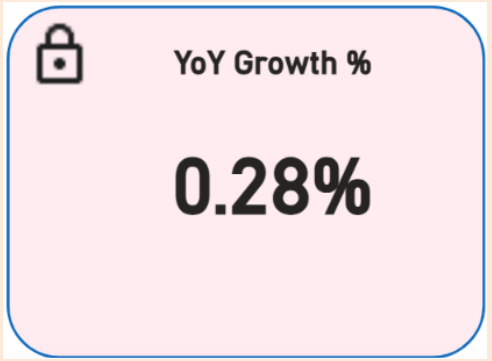

How does this year's (2024) transaction amount compare with the previous year (2023)?

FORMULA / DAX MEASURE

```
Transaction Amount YoY % =
    DIVIDE
    (
        [Total Transaction Amount] -
        [Total Transaction Amount PY],
        [Total Transaction Amount PY],
        0
    )

```

RESULTANT VISUAL

ANALYST INSIGHT

YoY growth of **just 0.28%** means transaction value is effectively flat. **Customers** are **not transacting more than last year.**

RECOMMENDED ACTION

Prioritise usage levers: UPI/POS Incentives, Salary-account activation, Merchant tie-ups.

Transaction Amount - Current vs Previous Year

QUESTION

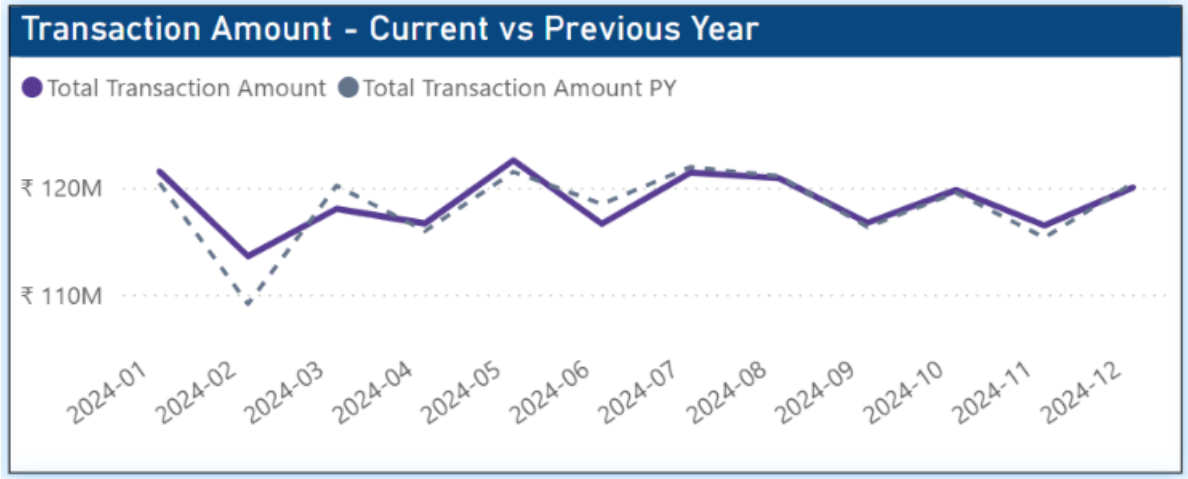

How does each month's transaction amount compare with the same month of the previous year(2023)?

FORMULA / DAX MEASURE

```
Total Transaction Amount PY =
    CALCULATE(
        [Total Transaction Amount],
        SAMEPERIODLASTYEAR(Calender[Date])
        )

```

RESULTANT VISUAL

ANALYST INSIGHT

This year and last year almost **overlap** in a narrow ₹113-123M band. **February is weak**, **May** and **Jul-Aug** are **strong**: seasonality is mild and the **curve is predictable**.

RECOMMENDED ACTION

Time offers for the Feb dip and other low months to smooth demand.

Loan Portfolio by Loan Type

1

QUESTION

Q Which loan types make up the largest share of the loan portfolio?

FORMULA / DAX MEASURE

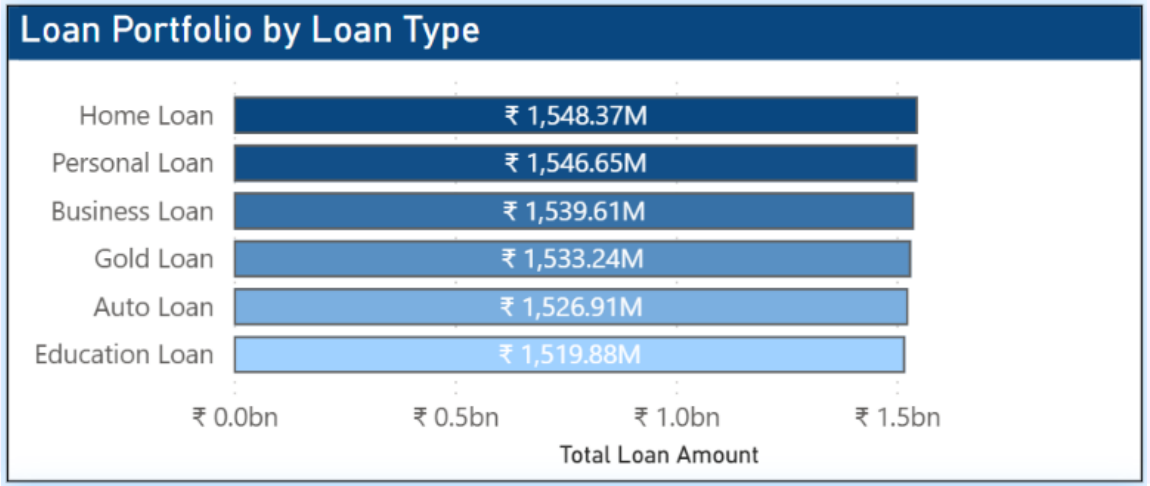

Y-axis

loan_type

X-axis

Total Loan Amount

RESULTANT VISUAL

ANALYST INSIGHT

All six loan types sit between ₹1.52bn and ₹1.55bn (16-17% each). The book is evenly diversified: no concentration risk, but no clear product focus either.

RECOMMENDED ACTION

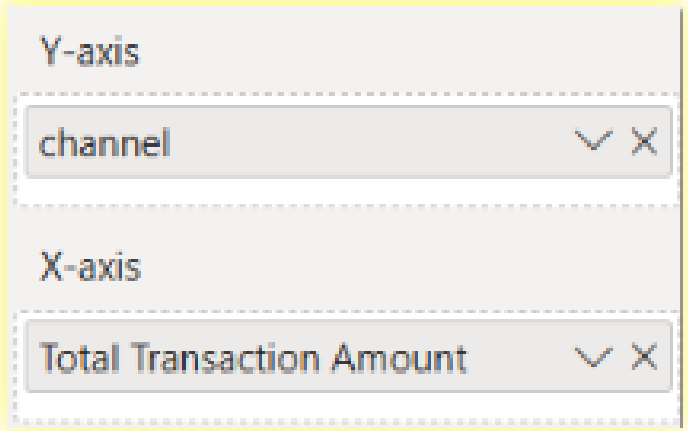

Choose growth products by risk-adjusted return (margin, defaults), not volume.

Transaction Amount by Channel

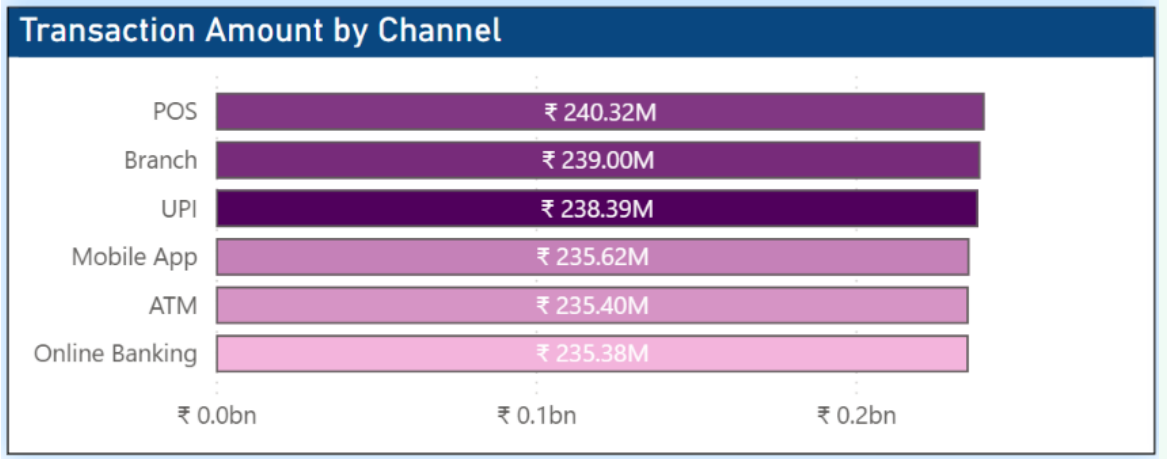

QUESTION

Q Which Channel (POS, Branch, UPI, Mobile App, ATM, Online Banking) drives the most transaction amount?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Channels are within 2% range of each other. **Digital** (UPI, Mobile, Online) carries about **50% of value**; Branch, ATM and POS carry the other 50%. **Branch** alone matches UPI, which is **costly to serve**.

RECOMMENDED ACTION

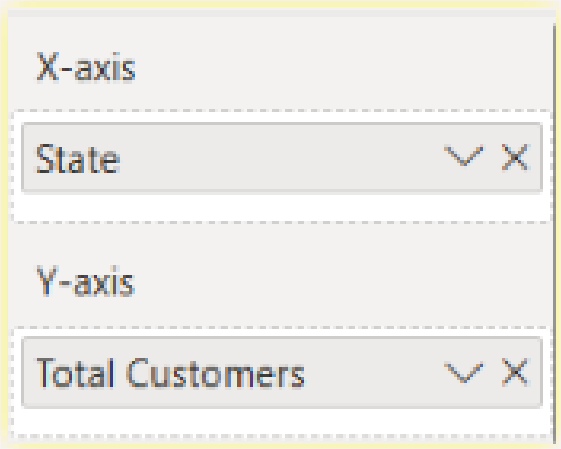

Migrate branch and ATM transactions to UPI/mobile to cut cost-to-serve.

Top 5 States by Customer Base

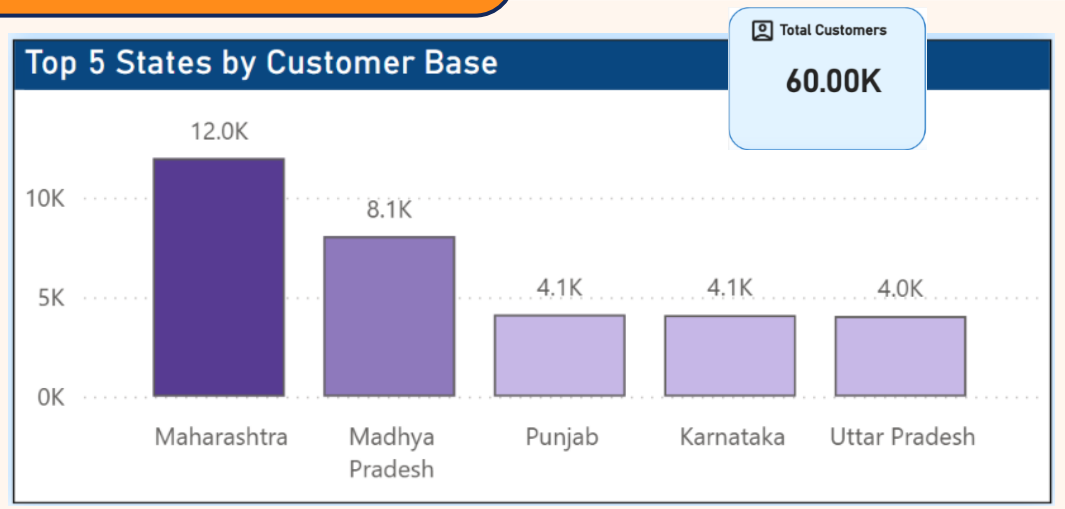

QUESTION

Which Five states have the largest customer base?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Maharashtra holds 20% of customers (12.0K), 1.5x Madhya Pradesh and about 3x each of the next three. The top **5 states** hold **54%** of customers: high geographic concentration.

RECOMMENDED ACTION

Defend Maharashtra; target big under-penetrated states such as Uttar Pradesh (4.0K).

02

Customer & Account Analytics

Customer growth, accounts and credit profile

10 VISUALS

In this section

1. Total Account Balance
2. Average Account Balance
3. No. of Active Cards
4. Average Customer Income
5. Average Credit Score
6. No. of Closed Accounts
7. New Customers by Year
8. Account Status Distribution
9. Customer Base by Occupation
10. Account Balance by Account Type

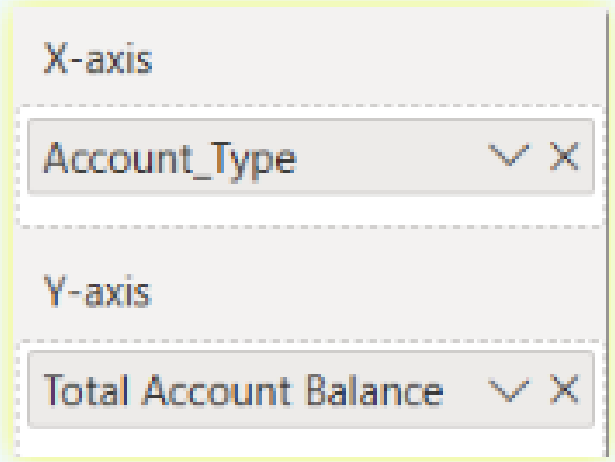

Total Account Balance

2

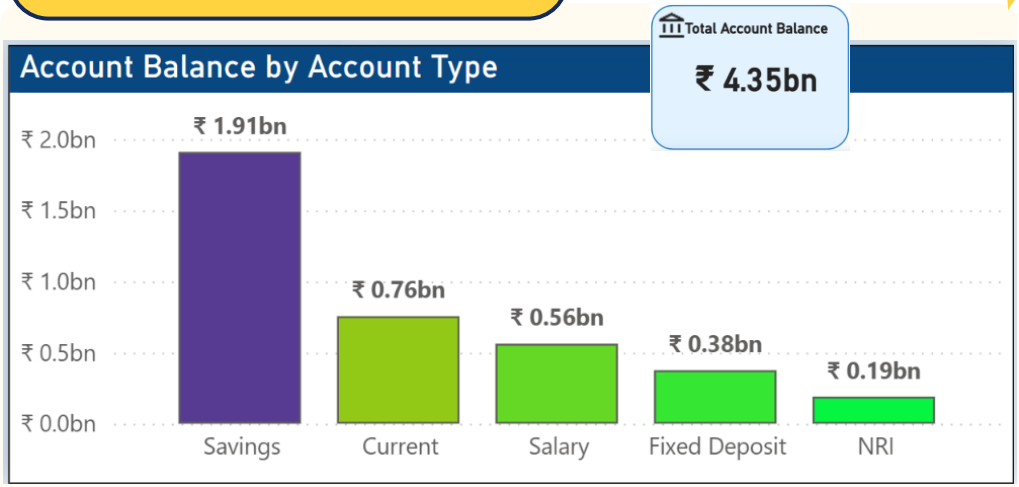

QUESTION

Q What is the combined balance held across all accounts?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

₹4.35bn in balances, about ₹72K per customer. **Savings** (44%) and Savings+Current+Salary (74% of balance) give cheap, **stable CASA funding**.

RECOMMENDED ACTION

Protect the CASA base with premium-account and sweep-in offers.

Average Account Balance

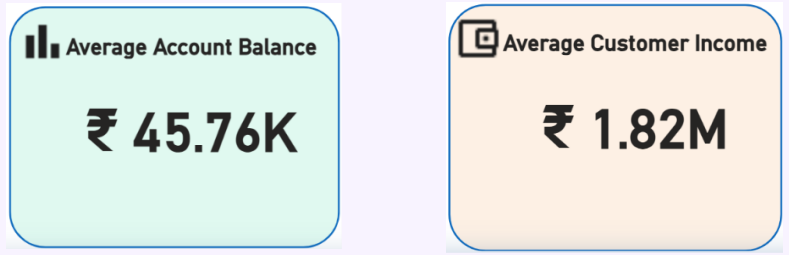

QUESTION

What is the Average Balance per account?

FORMULA / DAX MEASURE

```
Average Account Balance =
    AVERAGE(Accounts[balance])
```

RESULTANT VISUAL

ANALYST INSIGHT

The **₹45.8K average balance** is only about **2.5% of** the **₹1.82M average customer income**. The **bank holds a small share of customers' wallets.**

RECOMMENDED ACTION

Launch salary-sweep, recurring-deposit and auto-save products.

No. of Active Cards

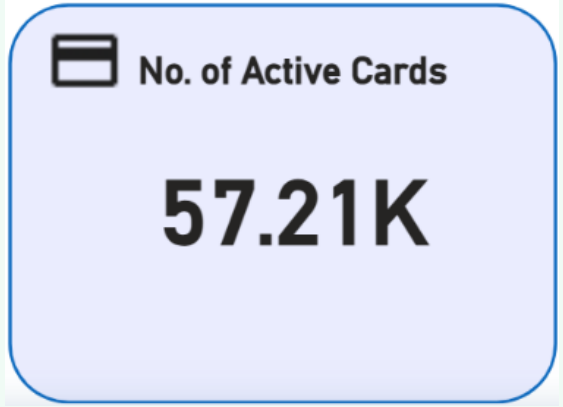

QUESTION

How many cards are currently active?

FORMULA / DAX MEASURE

```
No. of Active Cards =
    CALCULATE
        (
        COUNTROWS(Cards),
        Cards[status] = "Active"
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

57.2K active cards is about **0.95 per customer** and under **60% of the 95K accounts. Card penetration has headroom**, and cards bring **fees** and spend **data**.

RECOMMENDED ACTION

Send pre-approved card offers to customers without one; activate idle cards.

Average Customer Income

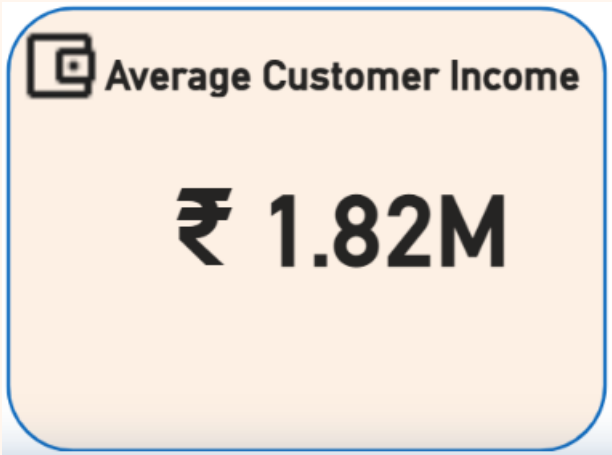

QUESTION

What is the Average Income of our customers?

FORMULA / DAX MEASURE

```
Average Customer Income =
        AVERAGE(
            Customers[annual_income]
            )
```

RESULTANT VISUAL

ANALYST INSIGHT

₹1.82M average income (about **₹18 lakh a year**) points to an **affluent base** with room for wealth, insurance and premium lending **products**.

RECOMMENDED ACTION

Build an affluent segment offer: investments, insurance, premium cards.

Average Credit Score

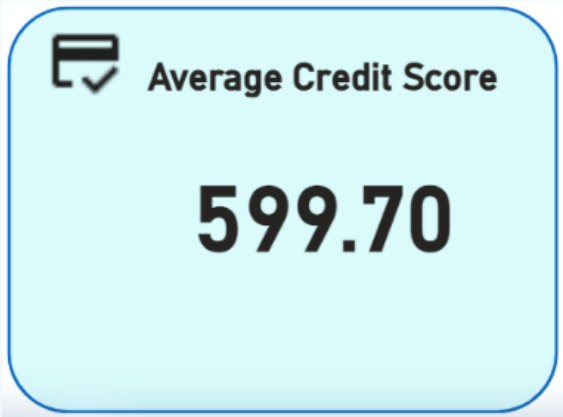

QUESTION

What is the Average Credit Score of the customer base?

FORMULA / DAX MEASURE

```
Average Credit Score =
    AVERAGE(
        Customers[credit_score]
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

An average score near 600 is **weak on** the usual **300-900 scale** and fits with the 12% late-payment rate and 1,594 defaults. **Credit quality** is the **main risk** in the book.

RECOMMENDED ACTION

Tighten underwriting, price by risk, offer credit-builder products.

No. of Closed Accounts

2

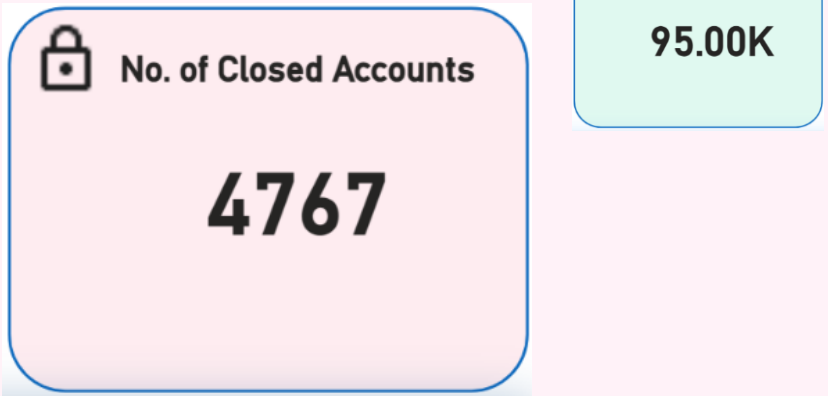

QUESTION

Q How many Accounts have been Closed?

FORMULA / DAX MEASURE

```
No. of Closed Accounts =
    CALCULATE(
        COUNTROWS(Accounts),
        Accounts[status] = "Closed"
    )
```

RESULTANT VISUAL

ANALYST INSIGHT

4,767 closed accounts are **5%** of all accounts, and another **10% are dormant**. Roughly one in seven accounts is already lost or inactive.

RECOMMENDED ACTION

Run exit surveys and a win-back plan before dormant accounts close.

New Customers by Year

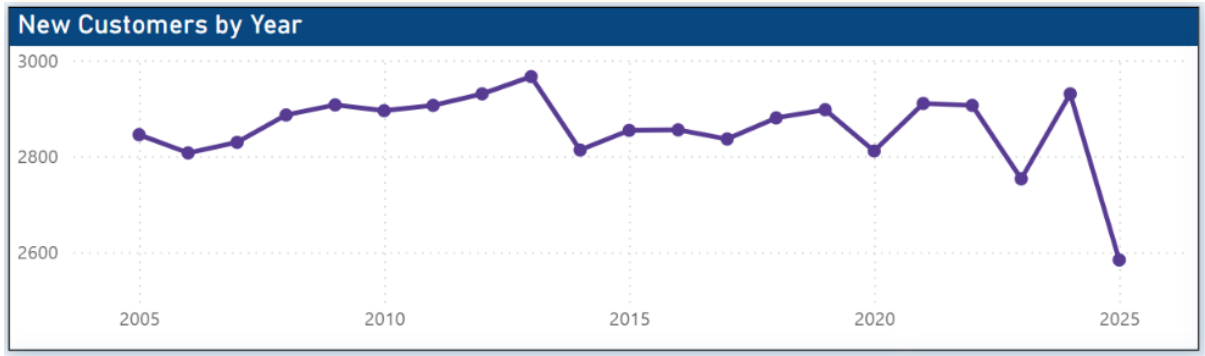

QUESTION

Q How has the number of Newly Acquired Customers changed year over year?

FORMULA / DAX MEASURE

```
Total Customers(Joined) =
    CALCULATE([Total Customers],
    USERELATIONSHIP(
        Calender[Date],
        Customers[join_date]
    )
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

New customers hover at **2,800-3,000 a year** for two decades with **no growth trend**. The 2025 drop (~2,600) is due to the data is available for partial year.

RECOMMENDED ACTION

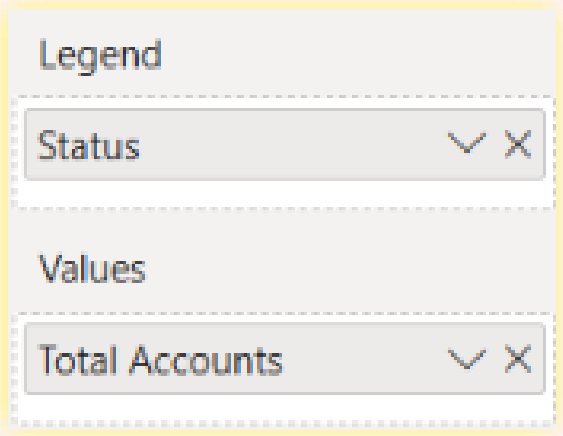

Break the plateau: Digital onboarding, Referrals, partnerships. Confirm 2025 cut-off at the end of year.

Account Status Distribution

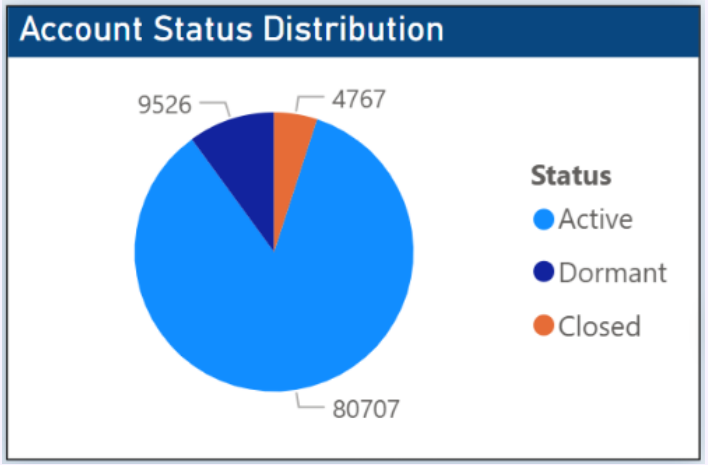

QUESTION

Q What share of accounts are Active, Dormant or Closed?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

85% of accounts are **active**, **10% dormant**, **5% closed**. Dormancy is double the closure rate, so **reactivating dormant** accounts is the **cheapest win**.

RECOMMENDED ACTION

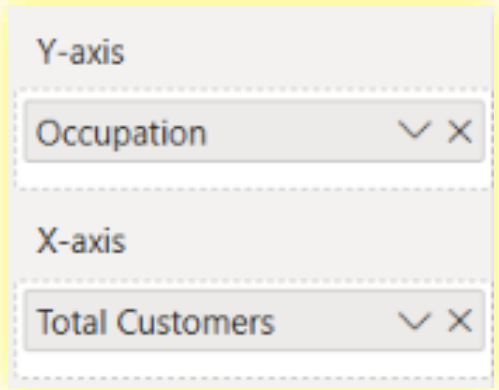

Trigger Reactivation Nudges after 60-90 days of inactivity.

Customer Base by Occupation

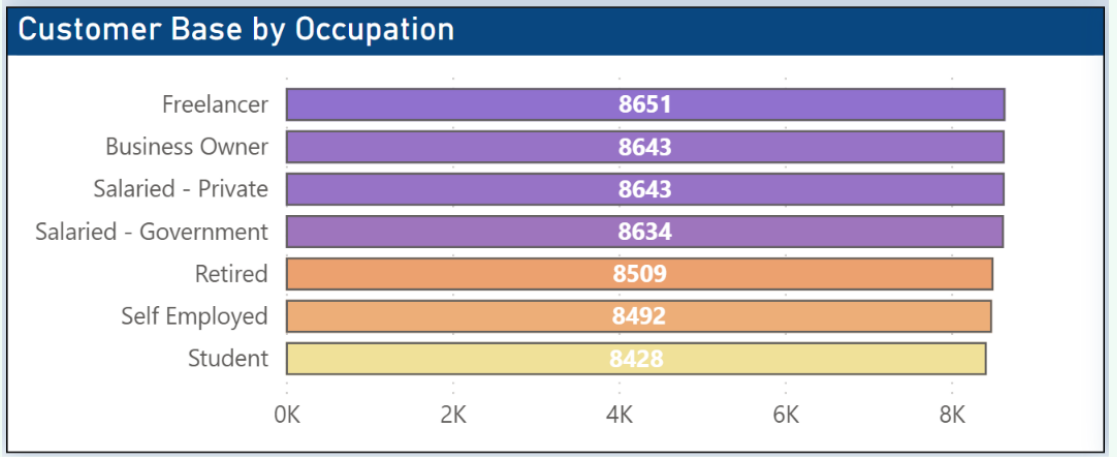

QUESTION

Which Occupations contribute the most customers?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Customers are spread almost **evenly** over seven occupations (8.4K-8.7K each). **Freelancers, business owners** and **self-employed together** are **43%** of the base.

RECOMMENDED ACTION

Build a business-banking offer (current account, overdraft, invoicing tools) for them.

03

Transactions & Fraud Analytics

Transaction trends, merchant activity and fraud risk

10 VISUALS

In this section

1. Average Transaction Value
2. Maximum Transaction Value
3. Total Fraudulent Amount
4. No. of Card Transactions
5. Fraud Rate
6. Average Fraudulent Transaction Amount
7. Transaction Volume Trend
8. Fraudulent Transactions by Merchant …
9. Card Transaction Amount by Merchant …
10. Fraudulent Transactions Trend

Average Transaction Value

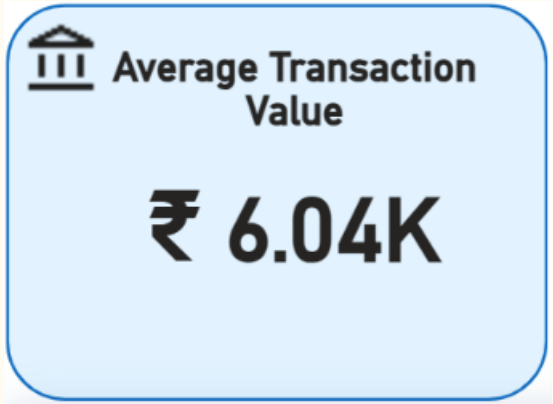

QUESTION

What is the Average value of a Single transaction?

FORMULA / DAX MEASURE

```
Average Transaction Value =
    AVERAGE(Transactions[amount])
```

RESULTANT VISUAL

ANALYST INSIGHT

The average transaction value is **₹6.04K.** It is the **baseline** for spotting anomalies and for **setting limits**, **cashback** and **fee levels**.

RECOMMENDED ACTION

Use customer-level averages to set dynamic alert thresholds.

Maximum Transaction Value

QUESTION

What is the highest single transaction value recorded?

FORMULA / DAX MEASURE

```
Maximum Transaction Value =
    MAX(
        Transactions[amount]
    )
```

RESULTANT VISUAL

ANALYST INSIGHT

The largest transaction (**₹75.6K**) is **12.5x the average. Outliers carry** the **highest loss if fraudulent** and **deserve extra checks**.

RECOMMENDED ACTION

Add step-up authentication for amounts far above a customer's norm.

Total Fraudulent Amount

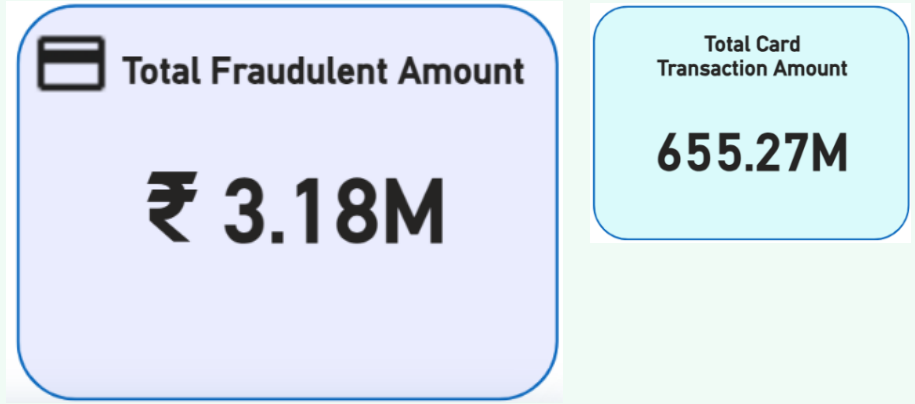

QUESTION

How much money is involved in Fraudulent Transactions?

FORMULA / DAX MEASURE

```
Total Fraudulent Amount =
    CALCULATE(
        SUM(
            Card_Transactions[amount]),
            Card_Transactions[is_fraud] = 1
            )
```

RESULTANT VISUAL

ANALYST INSIGHT

₹3.18M lost to fraud, **about 0.5% of card spend (~₹0.65bn)** and **roughly 1,700 incidents**. Small in value, but frequent and damaging to trust.

RECOMMENDED ACTION

Fund a fraud-analytics upgrade: each 10% reduction saves about ₹0.3M.

Fraud Rate

QUESTION

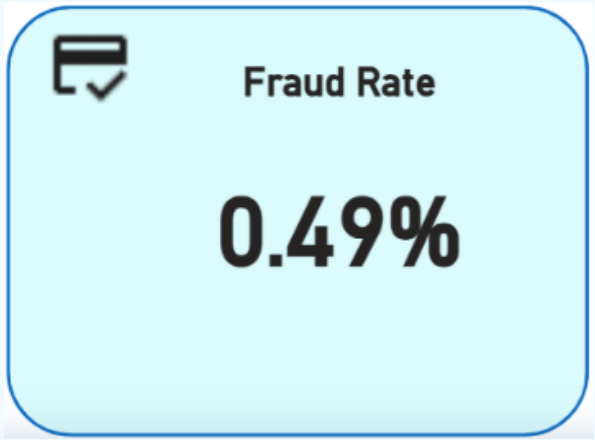

What percentage of transactions are fraudulent?

FORMULA / DAX MEASURE

```
Fraud Rate_Card Transactions =
    DIVIDE(
        [No. of Fraudulent Transactions],
        COUNTROWS(Card_Transactions),0
        )

```

RESULTANT VISUAL

ANALYST INSIGHT

0.49% means about 1 in 200 card transactions is fraudulent. **Even** a **low-looking rate** is **material at this volume**.

RECOMMENDED ACTION

Set a target (e.g. below 0.30%) and review it monthly with Risk.

Average Fraudulent Transaction Amount

QUESTION

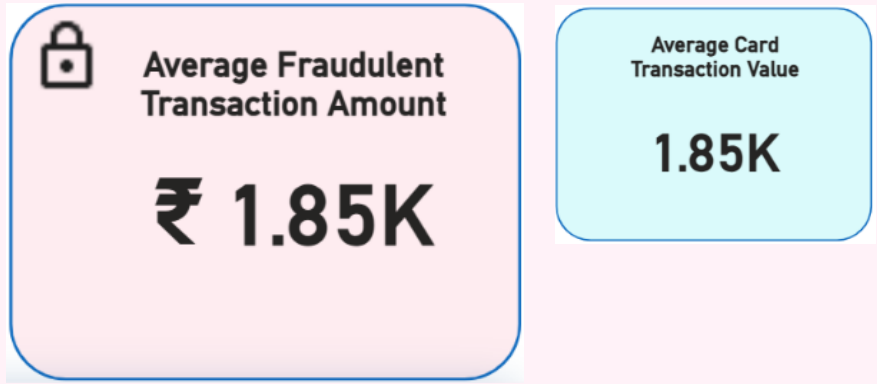

What is the Average amount of a Fraudulent transaction?

FORMULA / DAX MEASURE

```
Average Fraudulent Transaction Amount =
DIVIDE(
    [Total Fraudulent Amount],
    [No. of Fraudulent Transactions]
    )
```

```
Average Card Transaction Value =
    AVERAGE(
    Card_Transactions[amount]
    )
```

RESULTANT VISUAL

ANALYST INSIGHT

Average fraud (₹1.845K) is **close to** the **Average card purchase (~₹1.852K)**: Fraudsters blend in, so **amount** limits alone will **not catch** them.

RECOMMENDED ACTION

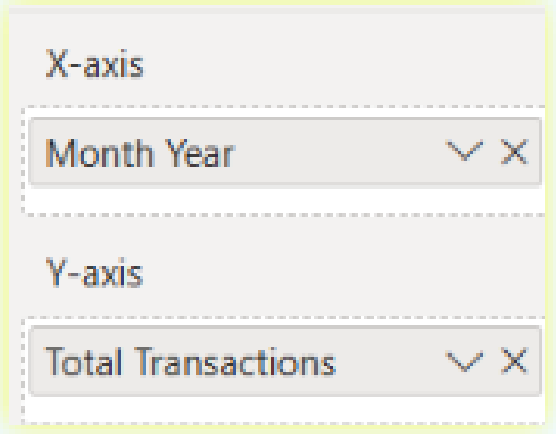

Add behaviour, velocity and device-based models, not only value rules.

Transaction Volume Trend

QUESTION

How does the Number of transactions change month by month?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Monthly volume moves between ~18.7K and ~21K (about +/-6%; the axis starts at 19K, which exaggerates it). **February is the low; Jan, May, Jul are peaks.**

RECOMMENDED ACTION

Plan staffing and campaigns around the Feb, Jun, Sep and Nov troughs.

Fraudulent Transactions by Merchant Category

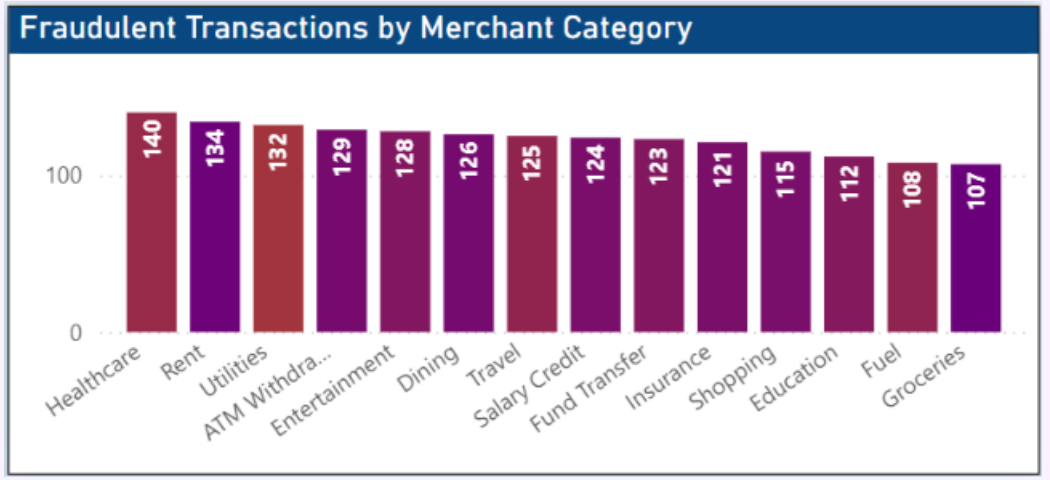

QUESTION

Which merchant categories see the most fraudulent transactions?

FORMULA / DAX MEASURE

```
No. of Fraudulent Transactions =
    CALCULATE(
        COUNTROWS(Card_Transactions),
        Card_Transactions[is_fraud] = 1
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

Fraud is spread across all 14 categories (107-140 cases): **No single hotspot**. Healthcare, Rent and Utilities lead and make up 24% of cases.

RECOMMENDED ACTION

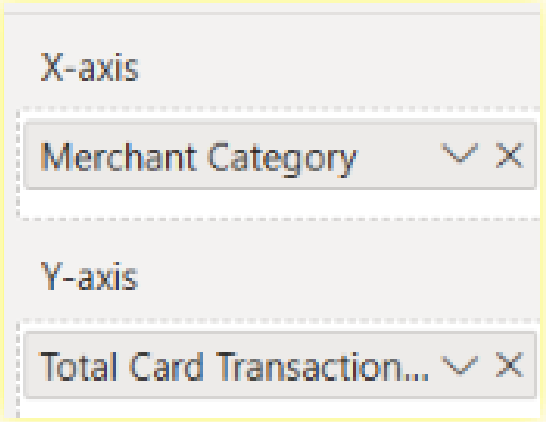

Add category rules for Healthcare/Rent/Utilities; keep baseline controls everywhere.

Card Transaction Amount by Merchant Category

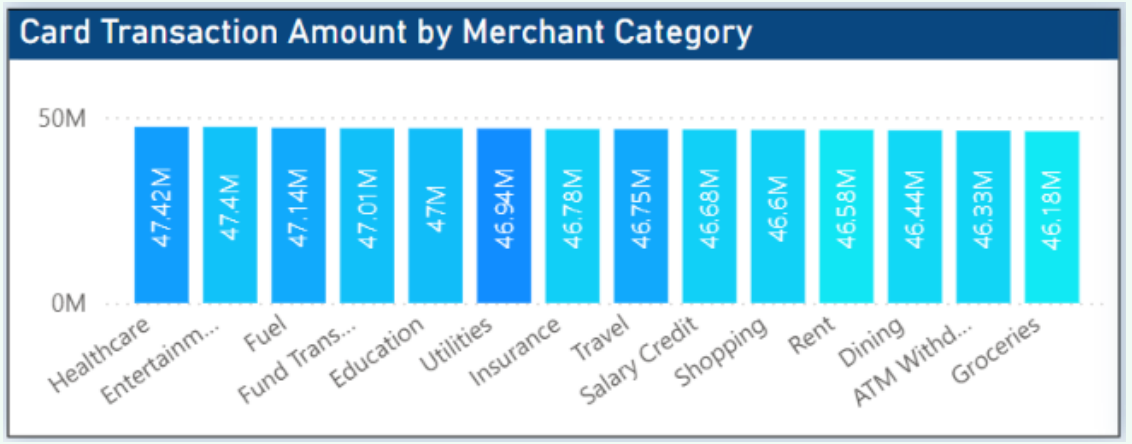

QUESTION

Which merchant categories have the highest card transaction amount?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Spend is **almost identical** across categories (₹46.2M-47.4M). **Healthcare tops** both **spend** and **fraud** cases, so it is the **priority category**. Such even spend is worth a data check.

RECOMMENDED ACTION

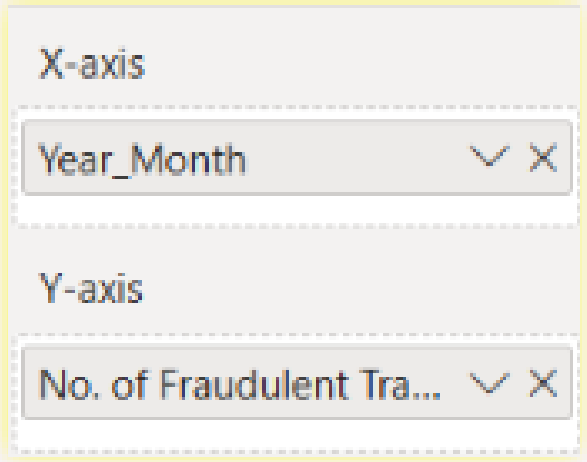

Prioritise Healthcare monitoring; validate category mapping in the source.

Fraudulent Transactions Trend

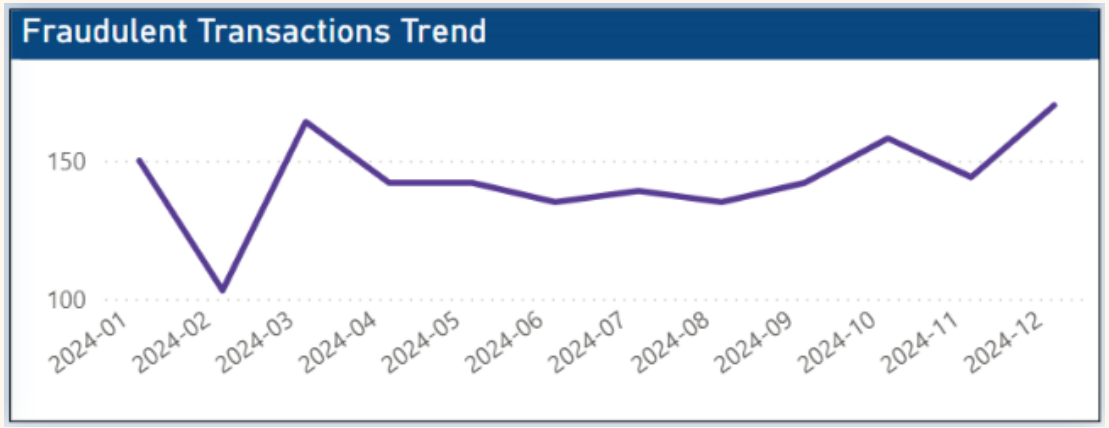

QUESTION

How are Fraudulent transactions trending over the months?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Fraud dips to ~105 cases in Feb, spikes to ~165 in Mar and climbs to ~170 in Dec, the year's high. The Q4 trend is upward.

RECOMMENDED ACTION

Tighten controls and alerts before year-end spending; investigate the March spike.

04

Loans & Customer Service Analytics

Lending performance, repayment and service quality

10 VISUALS

In this section

1. No. of Loans
2. No. of Active Loans
3. Ticket Resolution Rate
4. Total Loan Amount
5. No. of Defaulted Loans
6. Late Payment Rate
7. Loan Portfolio by Loan Type
8. Late Payment Trend
9. No. of Loans by Status
10. Support Tickets by Issue Type

No. of Loans

QUESTION

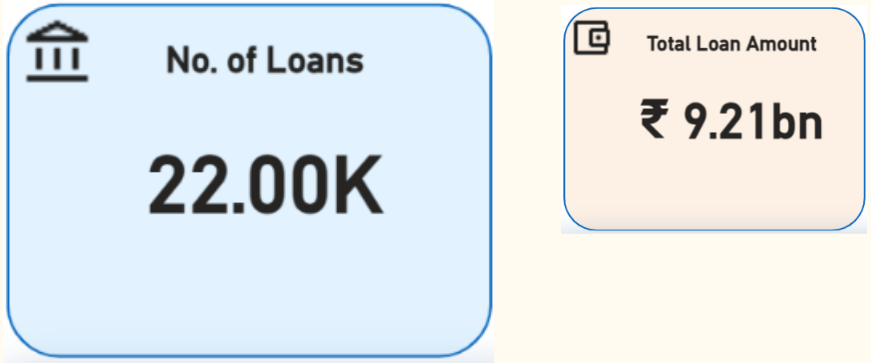

Q How many loans has the bank issued in total?

FORMULA / DAX MEASURE

```
No.of Loans =
    COUNTROWS(Loans)
```

```
Total Loan Amount =
    SUM(Loans[loan_amount])
```

RESULTANT VISUAL

ANALYST INSIGHT

22K loans worth **₹9.21bn**, about **₹419K per loan**. 65% are active, so most of the book is still earning.

RECOMMENDED ACTION

Track share of active loans that are 30+ days late every month.

No. of Active Loans

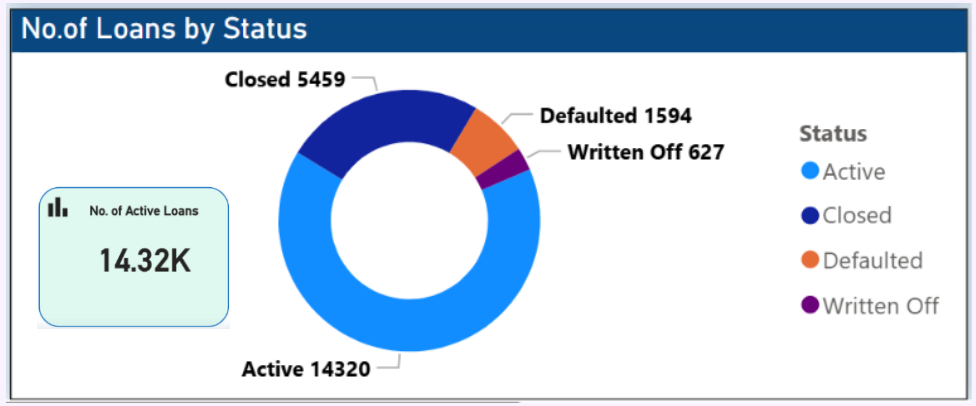

QUESTION

How many loans are currently active?

FORMULA / DAX MEASURE

```
No. of Active Loans =
    CALCULATE(
        COUNTROWS(Loans),
        Loans[status] = "Active"
    )
```

RESULTANT VISUAL

ANALYST INSIGHT

14.3K active loans (65%); 35% have **closed** (Repaid), which is a ready **pool of proven borrowers.**

RECOMMENDED ACTION

Offer top-up or new loans to the 5.5K customers with closed loans. Improve recovery on defaulted loans before they roll into write-off.

Ticket Resolution Rate

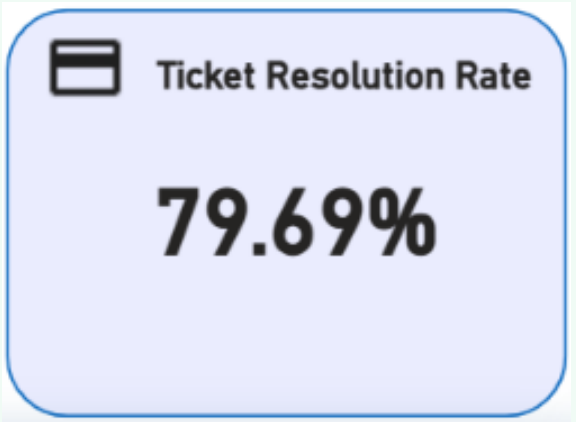

QUESTION

What percentage of support tickets get resolved?

FORMULA / DAX MEASURE

```
Ticket Resolution Rate =
    DIVIDE(
        [No. of Resolved Tickets],
        [No. of Support Tickets],
        0)
```

RESULTANT VISUAL

ANALYST INSIGHT

79.7% resolution leaves about 1 in 5 tickets open (~680 of ~3,360). That **hurts satisfaction**, especially on **fraud** and **KYC issues.**

RECOMMENDED ACTION

Target 90%+ resolution; add alerts for fraud and KYC queues.

No. of Defaulted Loans

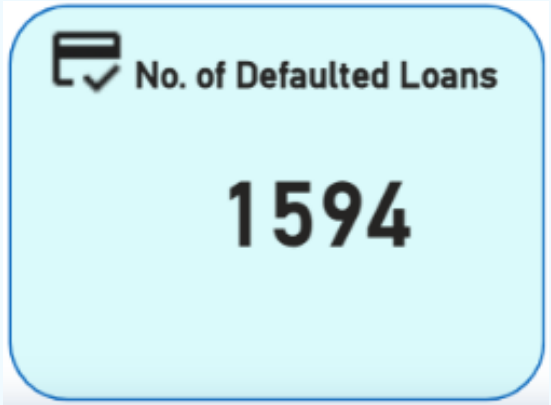

QUESTION

How many loans have defaulted?

FORMULA / DAX MEASURE

```
No. of Defaulted Loans =
    CALCULATE(
        COUNTROWS(Loans),
        Loans[status] = "Defaulted"
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

1,594 defaults are **7.2% of loans**; with 627 write-offs, 10% of loans have gone bad. That is **high for a lending book.**

RECOMMENDED ACTION

Add early-warning triggers and a dedicated recovery team.

Late Payment Rate

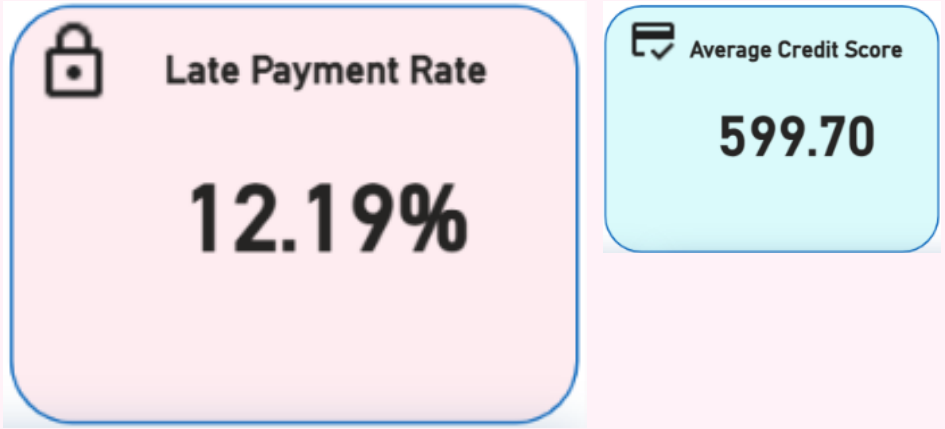

QUESTION

What percentage of loan payments are made late?

FORMULA / DAX MEASURE

```
Late Payment Rate =
    DIVIDE(
        [No. of Late Payments],
        COUNTROWS(Loan_Payments)
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

12.2% late payment is about 1 in 8 payments. With an **average credit score** near **600**, **late payment** is an **early signal** of **future defaults.**

RECOMMENDED ACTION

Send pre-due reminders, push auto-debit, restructure early-stage delinquents.

Loan Portfolio by Loan Type

QUESTION

Q How is the loan amount distributed across loan types?

FORMULA / DAX MEASURE

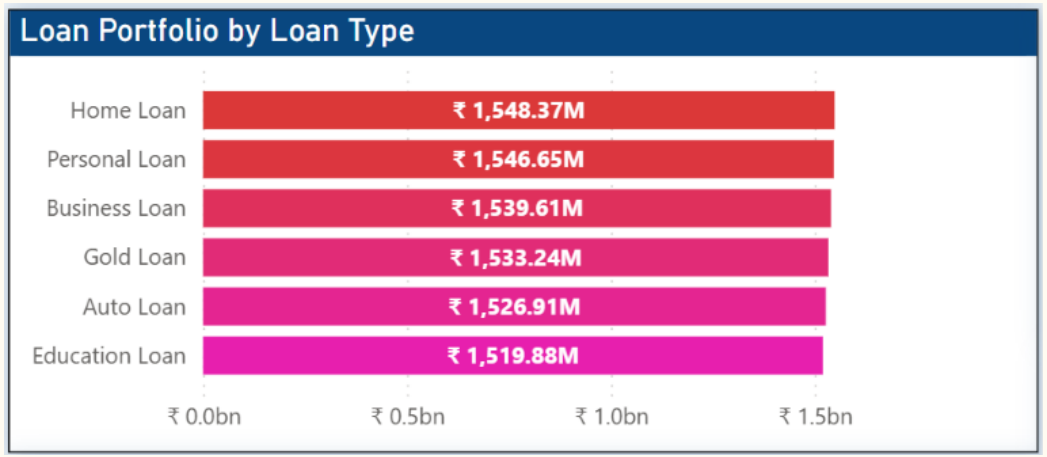

Y-axis

Loan Type

X-axis

Total Loan Amount

RESULTANT VISUAL

ANALYST INSIGHT

Loan amount is **spread evenly** (₹1.52-1.55bn; **16-17% each**) and **Home Loan leads** slightly. Which type defaults most matters more than which is largest.

RECOMMENDED ACTION

Overlay default and late-payment rate by loan type before choosing growth bets.

Late Payment Trend

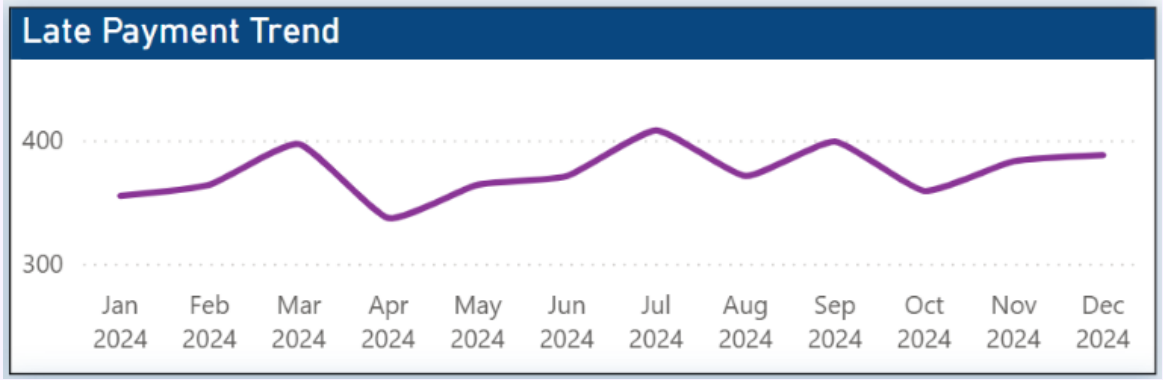

QUESTION

How do late payments trend across the months?

FORMULA / DAX MEASURE

```
No. of Late Payments =
CALCULATE(
    COUNTROWS(Loan_Payments),
    Loan_Payments[late_payment_flag] = 1
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

Late payments run ~340-410 a month, **peaking** in **Mar**, **Jul** and **Sep** and **lowest in Apr**. The axis is truncated, so the real swing is about +/-10%.

RECOMMENDED ACTION

Add reminders and collection effort ahead of the peak months.

Support Tickets by Issue Type

QUESTION

Which issue types generate the most support tickets?

FORMULA / DAX MEASURE

```
No. of Support Tickets =
    COUNTROWS(Support_Tickets)
```

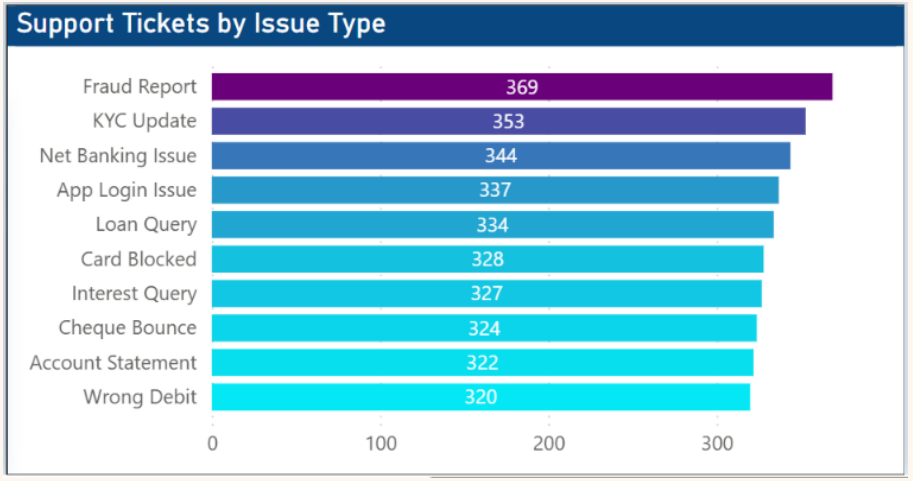

Y-axis

Issue Type

X-axis

No. of Support Tickets

RESULTANT VISUAL

ANALYST INSIGHT

Tickets are evenly spread (320-369), led by Fraud Report (369) and KYC Update (353), which links to the fraud findings. Net banking and app-login issues add 681 (20%).

RECOMMENDED ACTION

Set up a fast-track fraud desk, KYC self-service and fix digital login pain points.

05

Financial Performance & Growth Analytics

Transaction trends, period comparisons and growth performance

10 VISUALS

In this section

1. Transaction Amount MTD
2. Transaction Amount QTD
3. Transaction Amount YTD
4. MoM Growth %
5. QoQ Growth %
6. YoY Growth %
7. Monthly Transaction Amount
8. Cumulative Transaction Amount
9. Quarterly Transaction Amount
10. Monthly Growth vs 3 Month Moving Average (%)

Transaction Amount MTD (Dec 2024)

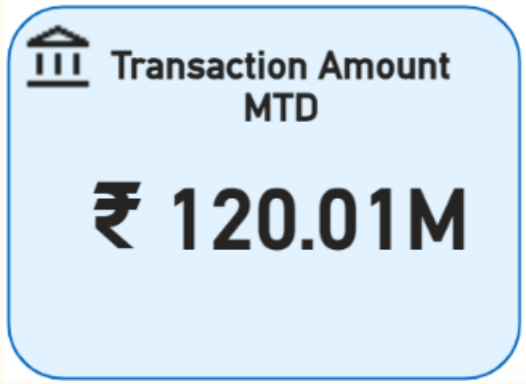

QUESTION

How much has been transacted in December 2024 so far (MTD: 1 Dec to the latest date), and how does it compare with Nov 2024?

FORMULA / DAX MEASURE

```
Total Transaction Amount MTD =
    TOTALMTD(
        [Total Transaction Amount],
        Calender[Date]
    )
```

RESULTANT VISUAL

ANALYST INSIGHT

December 2024 closed at **₹120.0M:** about **3% above November (~₹116.5M),** level with December 2023 (~₹120M) and **1.4% above** the 2024 **monthly average (₹118.3M).** Solid, but **no year-end uplift.**

RECOMMENDED ACTION

Transaction Amount QTD (Q4 2024)

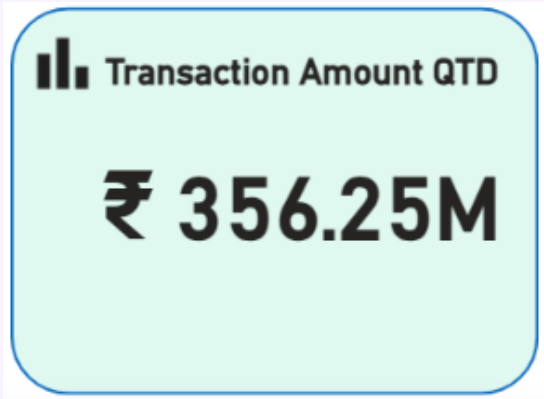

QUESTION

How much has been transacted in Q4 2024 so far (QTD: 1 Oct to the latest date), and is it ahead of Q3 2024?

FORMULA / DAX MEASURE

```
Total Transaction Amount QTD =
    TOTALQTD(
        [Total Transaction Amount],
        Calender[Date]
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

Q4 2024 (Oct-Dec) delivered **₹356.3M**, about **0.6% below Q3 2024 (~₹358.5M).** The **festive-season quarter** shows **no visible uplift**.

RECOMMENDED ACTION

Review Q4 festive marketing campaigns and change customer offers to make them more lucrative.

Transaction Amount YTD (FY2024)

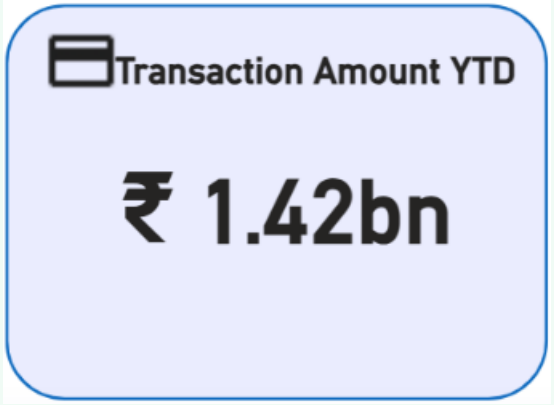

QUESTION

Q What is the transaction value for 2024 so far (YTD: 1 Jan to the latest date), and how does it compare with the same period of 2023?

FORMULA / DAX MEASURE

```
Total Transaction Amount YTD =
    TOTALYTD(
        [Total Transaction Amount],
        Calender[Date]
        )
```

RESULTANT VISUAL

ANALYST INSIGHT

FY2024 (Jan-Dec) **closed at ₹1.42bn, only ~₹4M (0.28%) above 2023 (~₹1.416bn):** a ₹118M monthly run rate with **almost no growth**. The four quarters add up to the same ₹1.42bn.

RECOMMENDED ACTION

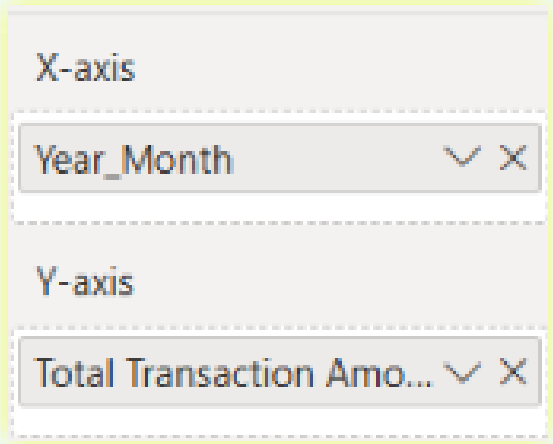

Set the FY2025 target on this base (e.g. +5-8% = ₹1.49-1.53bn), with channel owners.

Monthly Transaction Amount

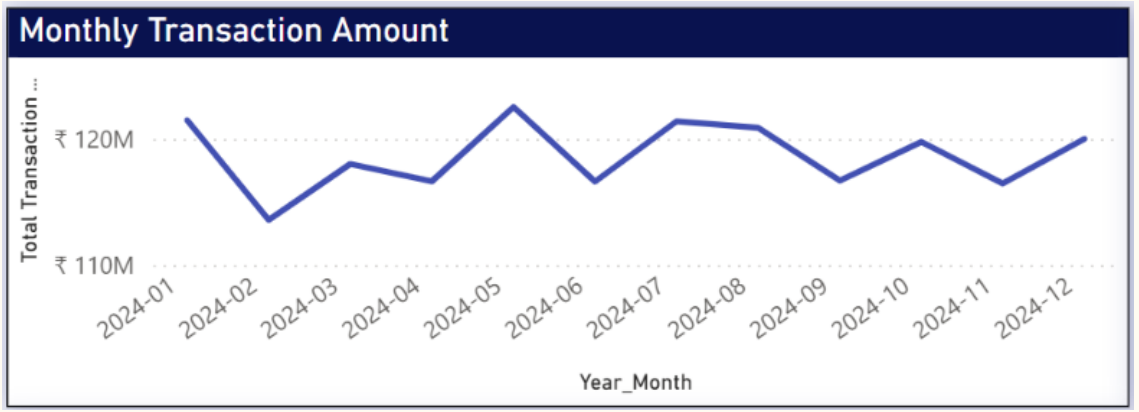

QUESTION

Which months of 2024 were strongest and weakest, and is there an upward or downward trend?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Monthly value ranges from **₹113.5M (Feb)** to **₹122.5M (May),** an **~8% spread**, with **no upward drift**. Per day it is steady at ~₹3.9M, so February's dip is mostly its 29 days.

RECOMMENDED ACTION

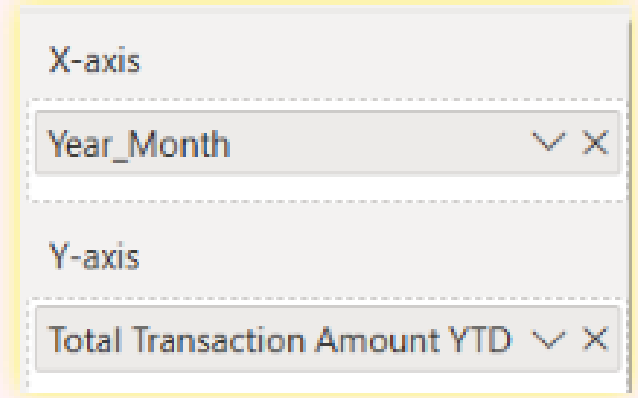

Compare months per day (or per working day) before calling a dip a problem.

Cumulative Transaction Amount

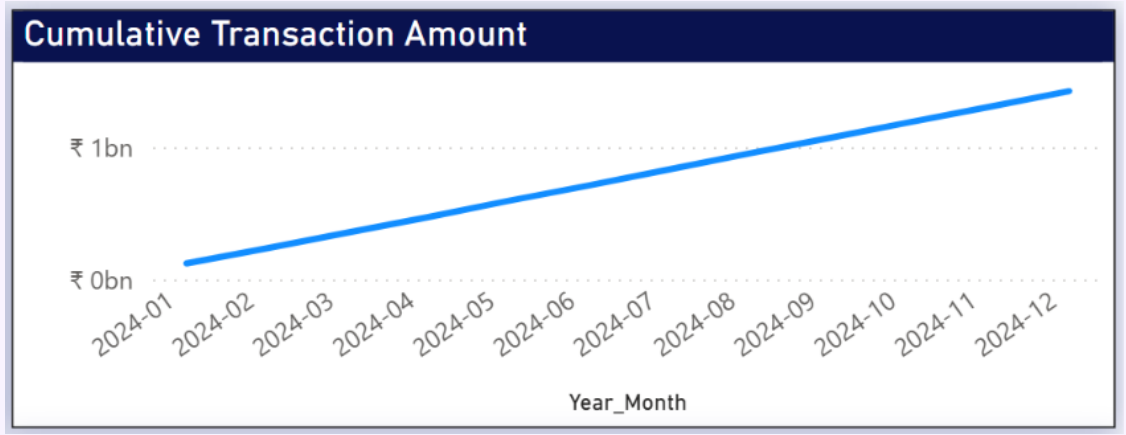

QUESTION

Q How does the running total of transactions build up through 2024 (YTD), and is the pace speeding up or slowing down?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Cumulative transaction value rose steadily to approximately ₹1.42 billion by December 2024, indicating **consistent transaction activity throughout the year**.

RECOMMENDED ACTION

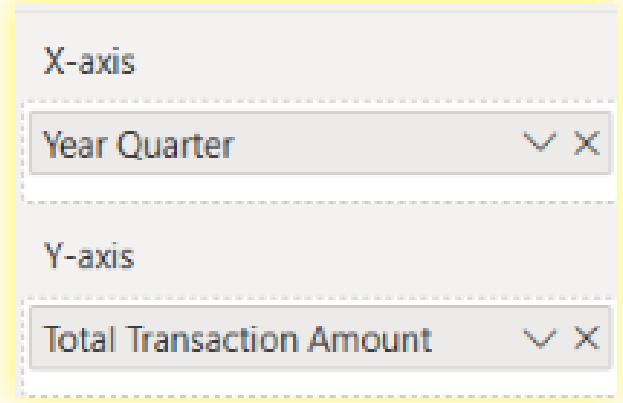

Track monthly performance against prior-year benchmarks and identify the channels and customer segments contributing most to transaction value.

Quarterly Transaction Amount

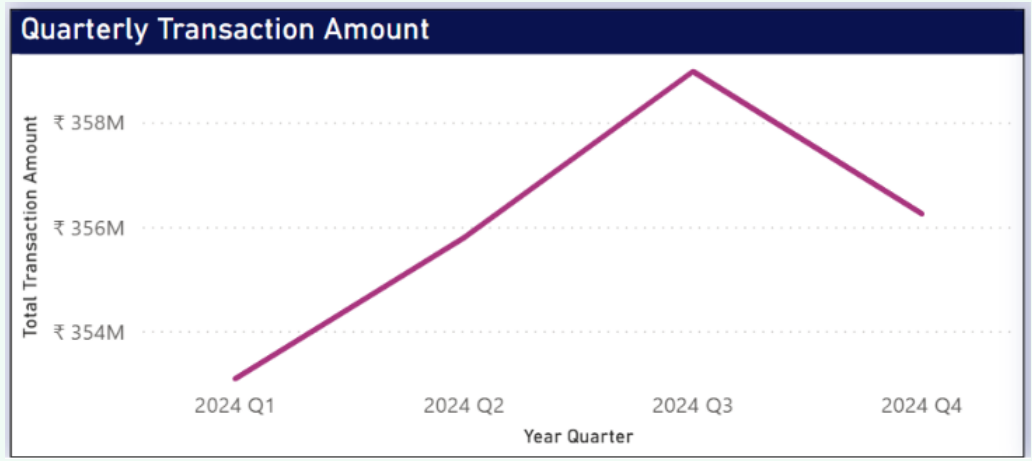

QUESTION

How did transaction value compare across the four quarters of 2024, and which quarter peaked?

FORMULA / DAX MEASURE

RESULTANT VISUAL

ANALYST INSIGHT

Quarters range from **₹353M to ₹358.5M (1.6% spread)** and sum to ~₹1.42bn, matching YTD. Q3 is the peak (+1.6% vs Q1), then Q4 slips 0.6%.

RECOMMENDED ACTION

Investigate the Q4 slowdown and set quarterly targets, not only an annual one.

Monthly Growth (%)

QUESTION

How volatile is month-on-month growth during 2024, and does it add up to real growth?

FORMULA / DAX MEASURE

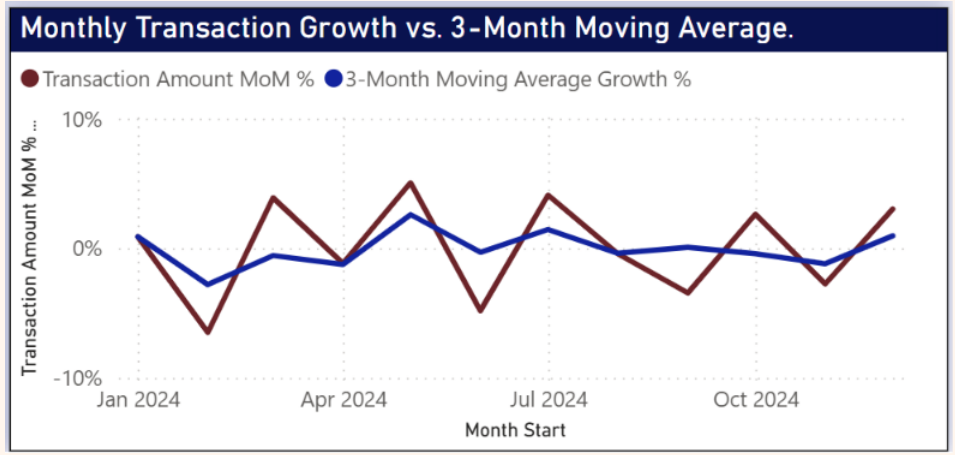

X-axis

Month Start

Y-axis

Transaction Amount MoM %

RESULTANT VISUAL

ANALYST INSIGHT

Monthly transaction **growth** fluctuated between approximately **-6%** and **+5%,** while the **3-month moving average** stayed **closer to zero**. This suggests **short-term volatility without** a strong, **sustained growth trend** during 2024.

RECOMMENDED ACTION

Smooth with a 3-month moving average and use YoY as the main growth KPI.
